

DISCOVER THE D/2 DIFFERENCE

Remove biological and air pollutant staining from building materials safely and effectively.

Developed by conservators without harmful and damaging salts, acids or bleach.

Developed by conservators, D/2 works without harmful or damaging salts, acids or bleach. As a result, D/2 has helped keep prestigious buildings and structures such as The White House and The Alamo pristine. For removing biological and air pollutant staining from historic and contemporary buildings or monuments and statues, D/2 is a reliable solution for homeowners, property managers and conservators.

Easy to use, this non-hazardous solution requires no mixing or special handling.

Non-hazardous and biodegradable, this ready-to-use product helps to prevent the pitfalls of creating a solution that is too strong, dangerous to mix, damaging or just plain ineffective. Instead, D/2 can be used safely at full strength with no mixing or special handling. Easily stored and with a shelf life of five years, D/2 is a practical solution for annual maintenance. After the initial treatment, a yearly light spraying is often adequate, but repeat applications are often helpful for heavier deposits.

Remove and help prevent pollution staining, mould, lichens & even stubborn red algae.

Due to pollution and carbon, black staining is common in urban areas or near roads. While mould, lichens, moss, algae and stubborn red algae can be found on various surfaces and often in damp spaces, where moisture and oxygen help them thrive. Removing these materials not only keeps surfaces looking fresh it can also prevent damage and decay over time.

Safely clean concrete, renders, wood, painted surfaces, plastic and aluminium cladding.

Cleaning methods containing salts, acids, or bleach can damage lime render or leave a film behind on walls where it's applied. Coloured renders, wood, or painted surfaces can also experience a loss of colour with these chemicals. With these harmful elements absent in D/2, you can safely and effectively keep these surfaces looking fresh, clean and maintained.

Keep stone masonry, brickwork, monuments & statues attractive and maintained.

Attractive and versatile, you can find stonework and brickwork across the UK. Keeping these materials clean looks excellent and prevents damage and decay over time, potentially decreasing long-term maintenance costs. D/2 can safely clean brickwork, cast stone and various natural stones such as marble, granite, limestone, sandstone, travertine and slate.
