

Prompt Fix

Prompt fix is a rapid setting, polymer-free fixing mortar with high breathability. It does not achieve the high strengths of epoxy or polymer based systems; it is compatible with fixing on to softer, porous backgrounds.

Prompt Fix is based on Prompt Roman Cement, with additives to control the set, curing and shrinkage.

Uses include;

- fixing porous stone, tiles and similar to lime concrete floors,
- adhesive fixing of woodfibre insulation board*
- fixing decorative stone or cast stone features to masonry*
- priming render before mechanically fixing features to prevent water penetration at the join
- slurry priming masonry immediately before rendering with Prompt based materials.

Packaging	7.5kg tubs
Working time	Typically 10 to 20 minutes, temperature dependent
Mixing method	Mixing drill and paddle (slow speed, non-air entraining). Do not re-work.
Application	Notched trowel (or brush for priming) to a damp, dust and dirt-free background.
Consumption	0.5 to 0.7 kg per mm per m2 with a notched trowel
Curing	Protect from frost for 72hrs. Do not allow rapid drying.

* additional mechanical fixing may be necessary depending on weight, strength and state of background, wind loading and other considerations.

Health & safety

Protect eyes and open wounds, wear protective clothing. See Health and Safety data sheet for further information. Composition

Risk Phrases

R36/38 Irritating to eyes and skin

R66 Repeated exposure may cause skin dryness or cracking

Safety phrases

S26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.

S24/25 Avoid contact with skin and eyes

S36 Wear suitable protective clothing
